14.05 Assignment Instructions

Instructions: Use the keyword `this` to distinguish between instance variables and local variables.

This is a very simple assignment. Don't overthink it.

1. Create a new project called 14.05 Assignment in the Mod14 Assignment folder.
2. Pick any two programs you have previously submitted that use one or more prefixed instance variables to distinguish between the corresponding local parameter variables (e.g., myStartMiles vs. startMiles, etc.).
3. Modify the source code so that the instance variable and the local variable share the same name.
4. Then use the keyword `this` to refer to the instance variable throughout the program.
